

A sepia-toned photograph of three cyclists riding a tandem bicycle. They are wearing dark cycling jerseys and shorts, and are captured in a dynamic, forward-leaning posture as if in a race. The background is a plain, light-colored wall.

Reproductibilité & Portabilité des performances

Software Heritage

The Re**Science** Journal

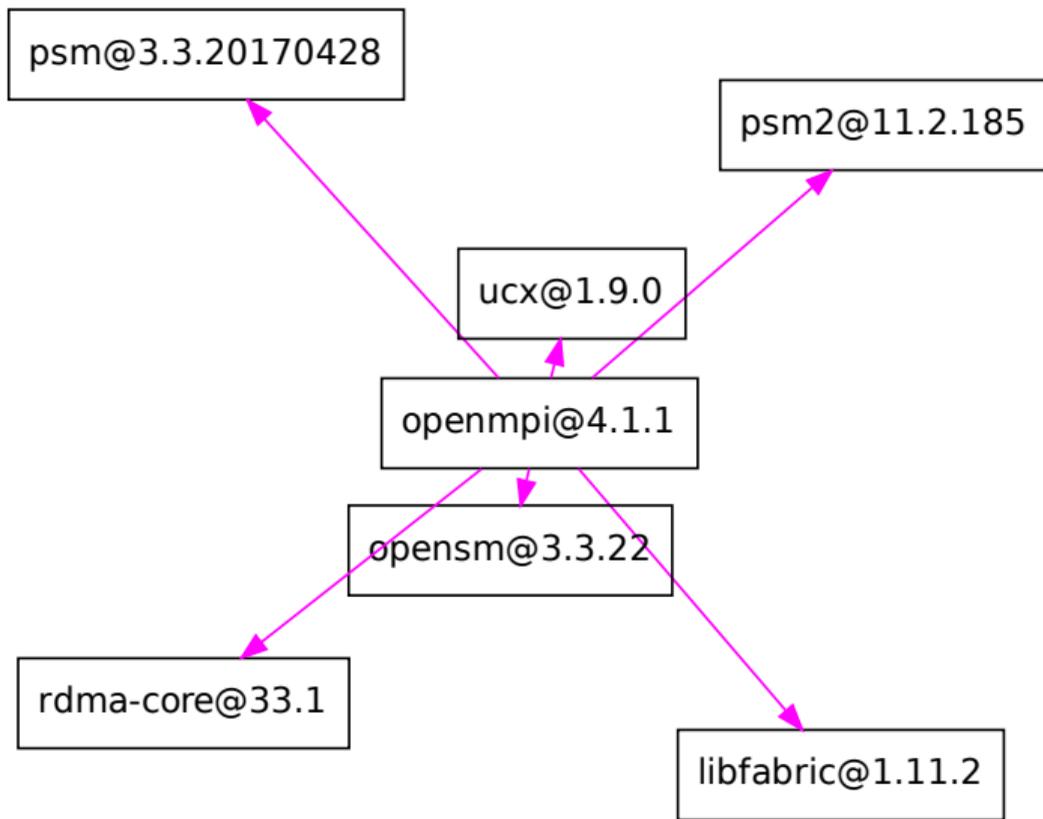

A photograph of a server room aisle. A woman in a light-colored shirt and dark pants is crouching on the metal floor, looking at a server rack. In the background, two other people are standing and talking. The room is filled with rows of server racks, and the lighting is a warm, yellowish-green. The text "Deux obsessions : MPI et AVX" is overlaid in white on the image.

Deux obsessions : MPI et AVX

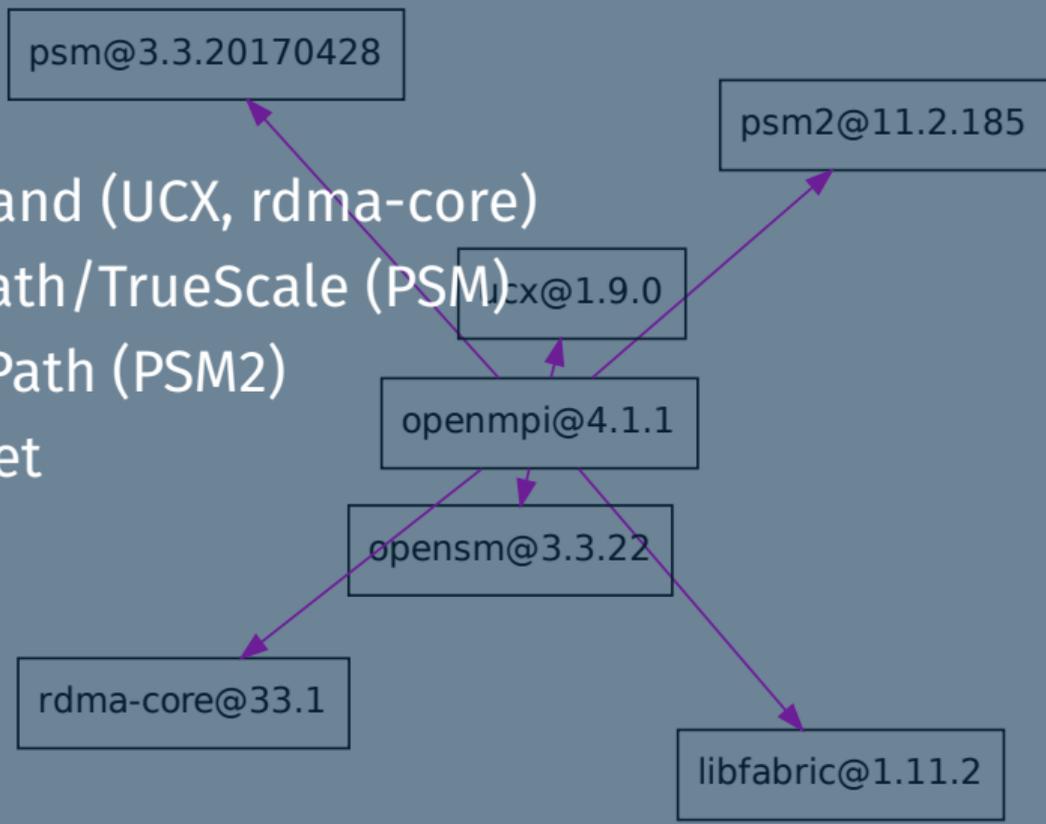

Some fairly common (but questionable) assumptions made by package managers (conda, pip, apt, etc.)

- **1:1 relationship between source code and binary (per platform)**
 - Good for reproducibility (e.g., Debian)
 - Bad for performance optimization
- **Binaries should be as portable as possible**
 - What most distributions do
 - Again, bad for performance
- **Toolchain is the same across the ecosystem**
 - One compiler, one set of runtime libraries
 - Or, no compiler (for interpreted languages)

A white, multi-pointed starburst shape is centered on a solid orange background. The starburst has eight points, with the top and bottom points being the longest and most prominent. The text "Function multi-versioning!" is written in a bold, black, sans-serif font across the center of the white starburst.
